Introduction

Thank you for purchasing an MPX series magnetostrictive level sensor from APG. We appreciate your business and your trust. Please take a few minutes to familiarize yourself with your MPX and this manual.

The MPX level sensor provides highly accurate and repeatable level readings in a wide variety of liquid level measurement applications. It is certified for installation in hazardous areas in the US and Canada by CSA for Class I, Division 1 & 2 and Class I, Zones 1 and 2 environments. The MPX-R’s large, buoyant, and robust floats allow it to be used in harsh applications where fouling or buildup might otherwise be of concern. The smaller, lighter weight floats of the MPX-E allow it to be used in applications where space is limited. The MPX-E Chemical has a chemical resistant coating, allowing for use in corrosive, acidic, and marine environments.

Reading your label

Every APG instrument comes with a label that includes the instrument’s model number, part number, and serial number. Please ensure that the part number on your label matches your order. The following electrical ratings and approvals are also listed on the label. Please refer to the Certificate of Compliance at the back of this manual for further details.

Electrical ratings

Rated 12 - 24 VDC, 4-20 mA, or 80 mA
Class I, Division 1 & 2, Groups C, and D
Ex d IIB
Ex nA IIB
Class I, Zone 1; AEx d IIB
Class I, Zone 2; AEx na IIB

Non-Incendive Wiring Requirements: Vmax \( U = 28\text{VDC} \), Imax \( I = 200\text{mA} \), \( C = 0\text{nF} \), \( L = 0\mu\text{H} \)

**IMPORTANT:** MPX level sensor MUST be installed according to drawing 9003468 (Hazardous Installation and Non-Incendive Wiring Drawing) on page 32 to meet listed approvals. Faulty installation will invalidate all safety approvals and ratings.

**DANGER:** OPEN CIRCUIT BEFORE REMOVING COVER or KEEP COVER TIGHT WHILE CIRCUITS ARE ALIVE; OUVRIR LE CIRCUIT AVANT D’ENLEVER LE COUVERCLE, or GARDER LE COUVERCLE BIEN FERME TANT QUE LES CIRCUITS SONT SOUS TENSION.

**DANGER:** WARNING -- EXPLOSION HAZARD -- SUBSTITUTION OF COMPONENTS MAY IMPAIR SUITABILITY FOR CLASS I, DIVISION 2; LA SUBSTITUTION D’ELEMENTS PEUT IMPAIRER LA SÉCURITÉ POUR LES EMPLACEMENTS DE CLASSE I, DIVISION 2.

**DANGER:** WARNING -- EXPLOSION HAZARD -- DO NOT DISCONNECT EQUIPMENT UNLESS POWER HAS BEEN SWITCHED OFF OR THE AREA IS KNOWN TO BE NON-HAZARDOUS; LA SUBSTITUTION D’ELEMENTS PEUT IMPAIRER LA SÉCURITÉ POUR LES EMPLACEMENTS DE CLASSE I, DIVISION 2.
Warranty and Warranty Restrictions

This product is covered by APG’s warranty to be free from defects in material and workmanship under normal use and service of the product for 24 months. For a full explanation of our Warranty, please visit https://www.apgsensors.com/about-us/terms-conditions. Contact Technical Support to receive a Return Material Authorization before shipping your product back.

Scan the QR code below to read the full explanation of our Warranty on your tablet or smartphone.

### Specifications

#### Performance

| Resolution | 4-20 mA: 14 bit DAC  
| Modbus: 0.04 in. (1 mm) |
| Accuracy | ±0.05% of Full Scale or 1 mm (whichever is larger) |

#### Environmental

| Operating Temperature | -40° to 185° F (-40° to 85° C) |
| Enclosure Protection | NEMA 4X, IP65 |
| Maximum Operating Pressure | MPX-E Chem: 30 PSIA @ 70° F (21° C) |

#### Electrical

| Supply Voltage | 12-24 VDC on sensor |
| Current Draw | Modbus (RS-485): 25 mA (MPX-E)  
| | 28 mA (MPX-R) |
| | 4-20 mA: 22 mA single / 44 mA dual (Max) |

#### Materials of Construction

| Housing | Cast aluminum, epoxy coated |
| Stem | MPX-E: 0.5” Ø 316L SS |
| | MPX-E Chemical: 0.5” Ø 316L SS with chemical resistant coating |
| | MPX-R: 1” Ø 316L SS |
| Mounting (slide) | 316L SS |
| Compression Fitting (slide) | Aluminum with Neoprene bushing |

#### Connectivity

| Output | Modbus RTU (RS-485)  
| 2 wire, loop-powered 4-20 mA  
| 3 wire, loop-powered dual 4-20 mA |

#### Programming

| RS-485 | Optional RST-6001 USB-to-RS-485 converter |
| 4-20 mA | Optional RST-4100 programming module |
• **Model Number Configurator**

Model Number: MPX - _E_ _____ _____ - _____ _____ _____ _____ - _____ - _____ _____ - ______

A. Stem Type

- ▲ Min. 48 in. - Max. 378 in.

K. End Plug Options
- ▲ ▲ 1 in. Stem, Standard
- 2 1 in. Stem, Keyhole for Cotter Pin
- 3 1 in. Stem, 3/8-16 x .6” L Threads

L. Float Stop Options
- ▲ ▲ 1 in. Stem, 316L SS, 1 piece, 1.5 in. OD
- C 1 in. Stem, 316L SS, 2 piece, 1.75 in. OD
- D 1 in. Stem, Titanium 2, 1 piece, 1.5 in. OD

N. 4-20 Output Set Points
MPX-R2/R3
- A__ 4mA set point location, in inches from bottom of probe
- B__ 20mA set point location, in inches from top of probe

▲ This option is standard
• **Electrical Connections and System Wiring Diagrams**

**Modbus System Wiring For MPX-E4, MPX-R4 Sensors**

```
+12-24 Vdc
GND
```

Use Shielded Cable

120 Ω terminating resistor

**Modbus System Wiring with RST-6001 For MPX-E4, MPX-R4 Sensors**

```
+12-24 Vdc
GND
```

Use Shielded Cable

Equivalent 120 Ω terminating resistor internal to RST-6001

**IMPORTANT**: Refer to Chapter 5 for Hazardous Location and Non-Incendive Wiring diagram.

**IMPORTANT**: For lightning and surge protection on MPX-E4 or -R4, either connect the grounding screw (see pages 1-3) to an earth ground, or ensure that the tank mounting of the MPX is grounded.
**4-20 mA Loop Wiring**

**4-20 mA Single Float Loop Wiring**
(MPX-E2 and MPX-R2 Series)

- **Sensor**
- **12-24 Vdc**
- **Out (1)**

**4-20 mA Dual Float Loop Wiring**
(MPX-E3 and MPX-R3 Series)

- **Sensor**
- **12-24 Vdc**
- **Out 1**
- **Out 2**

**4-20 mA Programming Wiring**

- **Sensor**
- **12-24 Vdc**
- **Out (1)**
- **Out 2**

**RST-4100**

- **USB to computer with APG Modbus software**

**Programming configuration** is for programming ONLY. After programming, sensor must be reintegrated to 4-20 mA loop for proper system operation.

**NOTE**:
For MPX-E3 & MPX-R3 series sensors, - Vdc from power source must be connected to Output1 on sensor for correct sensor programming.
Chapter 2: Installation and Removal Procedures and Notes

• Tools Needed

You will need the following tools to install your MPX level sensor:
• Wrench sized appropriately for MPX mounting
• Wrench sized appropriately for conduit connections
• Flat-head screwdriver for wire terminals
• Channel lock pliers for tightening compression fitting
• 3/32” hex Allen wrench for 1-piece MPX-E float stops
• 1/8” hex Allen wrench for 1-piece MPX-R float stops
• 3/16” hex Allen wrench for 2-piece MPX-R float stops

• Physical Installation Notes

The MPX should be installed in an area--indoors or outdoors--which meets the following conditions:
• Ambient temperature between -40°C and 85°C (-40°F to +185°F)
• Relative humidity up to 100%
• Altitude up to 2000 meters (6560 feet)
• IEC-664-1 Conductive Pollution Degree 1 or 2
• IEC 61010-1 Measurement Category II
• No chemicals corrosive to stainless steel (such as NH₃, SO₂, Cl₂ etc.)
• Ample space for maintenance and inspection

Additional care must be taken to ensure:
• The probe is located away from strong magnetic fields, such as those produced by motors, transformers, solenoid valves, etc.
• The medium is free from metallic substances and other foreign matter.
• The probe is not exposed to excessive vibration.
• The float(s) fit through the mounting hole. If the float(s) does/do not fit, it/they must be mounted on the stem from inside the vessel being monitored.
• The float(s) is/are oriented properly on the stem (See Figure 2.1). MPX-E floats will be installed by the factory. MPX-R floats are typically installed by customer.

⚠️ NOTE: For MPX-E Chemical sensors: Chemical resistant coating will scar and expose stainless steel if scraped or abused. Use caution when handling. Always transport in packaging to protect probe and coating.
Figure 2.1

![Taper](image)

**IMPORTANT:** Floats must be oriented properly on the stem, or sensor readings will be inaccurate and unreliable. Untapered floats will have a sticker indicating the top of the float. Remove sticker prior to use.

**IMPORTANT:** MPX level sensor MUST be installed according to drawing 9003468 (Hazardous Installation and Non-Incendive Wiring Drawing) on page 32 to meet listed approvals. Faulty installation will invalidate all safety approvals and ratings.

### Physical Installation Instructions

- If your sensor's stem and floats fit through the mounting hole, carefully lower the assembly into the vessel, then secure the sensor to the vessel.
- If the floats do not fit, mount them on the stem from inside the vessel being monitored. Then secure the sensor to the vessel.
- For sensors with float stops, refer to the assembly drawing included with the sensor for float stop installation locations.
- For MPX-E Chemical, ensure probe is concentric with fitting so as not to scrape chemical resistant coating off against threads of fitting.

### Electrical Installation

- Remove the housing cover of your MPX.
- Feed system wires into MPX through 3/4” NPT conduit openings. Fittings must be UL/CSA Listed for CSA installation.
- Connect wires to MPX terminals. Use crimped ferrules on wires, if possible.
- Replace the housing cover.
- For lightning and surge protection on MPX-E4 and MPX-R4 models, either connect the grounding screw (see dimensions on page 1-3) to an earth ground, or ensure that tank mounting of MPX is grounded.

See Electrical Connections and System Wiring Diagrams (pages 8-9) for Modbus and 4-20 mA wiring examples.

**NOTE:** For MPX-E Chemical with E4 output option, there is no ground screw on coupler/NPT. Internal housing ground must be used for lightning protection.
• **Removal Instructions**

Removing your MPX level sensor from service should be done with care.

- If the floats on your sensor fit through the mounting hole, carefully lift the entire sensor assembly out of and away from the vessel.
- If the floats on your sensor do not fit through the mounting hole, they will need to be removed from the stem before the sensor can be removed. Be sure to drain the vessel being monitored to allow access to the floats and stem for removal.
- Clean the stem and floats of any build up or debris and inspect for damage.
- Store your sensor in a dry place, at a temperature between -40°F and 180°F.

**Chapter 3: Programming**

• **Modbus Programming**

MPX-E4 and MPX-R4 series sensors use standard Modbus RTU protocol (RS-485). The sensors can only operate as slave devices. Sensor default transmission settings are **9600 Baud, 8 Bits, 1 Stop Bit, No Parity**, and require a minimum delay of 300 ms between transactions. See MPX-E/R4 Modbus Register Lists on pages 13 and 14.

⚠️ **NOTE:** For more information about Modbus RTU, please visit [www.modbus.org](http://www.modbus.org).

⚠️ **NOTE:** MPX-E1 and MPX-R1 legacy models have the same Modbus settings and registers as MPX-E4 and MPX-R4.
• **Modbus Programming with RST-6001 and APG Modbus Software**

An APG RST-6001 Modbus Controller can be used in tandem with APG Modbus to program and control up to 20 MPX-E/R1 (legacy models) or MPX-E/R4 series sensors. Through APG Modbus, you can monitor the raw readings from the sensor, configure the data for distance, level, volume, or weight, and enter measurements for a strapping chart. See MPX-E/R4 Modbus Register Lists on pages 13 and 14.

> **NOTE**: For APG Modbus programming instructions, or to download APG Modbus software, please visit [www.apgsensors.com/support](http://www.apgsensors.com/support).

• **4-20 mA Programming with RST-4100 and APG Modbus Software**

An APG RST-4100 Programming Module can be used in tandem with APG Modbus to program a single MPX-E2/3 or MPX-R2/3 series sensor. Through APG Modbus, you can configure the 4 mA and 20 mA output setpoints and calibration settings. If your monitoring equipment (PLC, etc.) can be configured to interpret the 4-20 mA output(s) of the MPX as volume, then the MPX can be configured accordingly via APG Modbus. See MPX-E/R2 & MPX-E/R3 Modbus Register Lists on pages 19 and 20.

However, the RST-4100 is not designed to be used for continuous monitoring of a sensor. After programming your MPX sensor, the RST-4100 must be removed and the wiring returned to normal. See 4-20 mA Loop Wiring and 4-20 mA Programming Wiring on page 9.

*These registers are not used by the MPX-E4 or -R4, even though they are labeled in the APG Modbus software.

†Setting is factory calibrated. Do not adjust.
• MPX-E/R4 Modbus Sensor Parameters

40401 - Units

Determines the units of measure for the calculated reading when Application Type is set to 0, 1, or 7.

1 = Feet  
2 = Inches  
3 = Meters

40402 - Application Type

Determines the type of calculated reading performed by the sensor.

0 = Distance
1 = Level
2 = Standing Cylindrical Tank with or without Hemispherical Bottom
3 = Standing Cylindrical Tank with or without Conical Bottom
4 = Standing Rectangular Tank with or without Chute Bottom
5 = Horizontal Cylindrical Tank with or without Spherical Ends
6 = Spherical Tank
7 = Pounds (Linear Scaling)
8 = N/A
9 = Vertical Oval Tank
10 = Horizontal Oval Tank
11 = Strapping Chart

See MPX-E/R Modbus Application Type Parameters pages 26-30.

40403 - Volume Units

Determines the units of measure for the calculated reading when Application Type is set to 2 - 6 or 9 -11.

1 = Feet³  
2 = Million Feet³  
3 = Gallons  
4 = Meters³  
5 = Liters  
6 = Inches³  
7 = Barrels

40404 - Decimal Place

Determines the number of decimal places included in the Calculated Reading(s). The Calculated Reading will always be returned as a whole number.

For example, a Calculated Reading of 1126.658 (gallons, ft³, etc.) will be returned as follows:

Decimal Place = 0  Volume = 1127 (rounded to nearest whole number)
Decimal Place = 1  Volume = 11267 (divide by 10 to get true result)
Decimal Place = 2  Volume = 112666 (divide by 100 to get true result)
Decimal Place = 3  Volume = 1126658 (divide by 1000 to get true result)
40405 - Maximum Distance (Factory Calibrated)

Sets the distance (beginning from the Zero Reference) to the point where the sensor will stop looking for float signals, usually the bottom of the stem. A float beyond the Maximum Distance value will not be detected.

40406 - Full Distance

Sets the positive distance (beginning from the sensor Zero Reference) to the point where the monitored vessel is considered full.

40407 - Empty Distance

Sets the positive distance (beginning from the Zero Reference) to the point where the monitored vessel is considered empty (usually the bottom of the stem).

40408 - Sensitivity (Factory Calibrated)

Sets the level of gain that is applied to the returning float signal.

40409 - Pulses (Factory Calibrated)

Controls the duration of the signal being sent down the magnetostrictive wire.

40410 - Blanking (Factory Calibrated)

Sets the blanking distance, which is the zone from the Zero Reference of the sensor to the point from which the first signal will be valid. Signals from a float in the blanking area will be ignored.

40412 - Averaging (Factory Calibrated)

Sets the number of qualified received float signals to average for the raw reading. Qualified received signals are placed in a first-in, first-out buffer, the contents of which are averaged for the raw reading. The larger the number of qualified received signals being averaged, the smoother the reading will be, and the slower the reading will be to react to quickly changing targets.
**40413 - Filter Window (Factory Calibrated)**

Determines the physical range (0 - 10,364 mm) of qualified received signals, based on the current raw reading. Signals beyond the +/- Filter Window range of the current reading will not qualify unless the average moves. Signals outside the extents of the Filter Window are written to the Out of Range samples buffer (Holding Register 40414). See Figure 3.1.

Example:
Window = 300 mm
Out of Range Samples = 10

![Figure 3.1](image)

**40414 - Out of Range Samples (Factory Calibrated)**

Sets the number of consecutive samples outside the Filter Window (Holding Register 40413) necessary to automatically adjust the current reading and move the Filter Window.

**40415 - Sample Rate (Factory Calibrated)**

Sets the update rate of the sensor (between 10 - 1000 ms). Shorter time delays allow for quicker sensor response times to changing levels. Typical setting is 200 ms. Settings under 200 ms are not recommended.

**40416 - Multiplier (Factory Calibrated)**

Calibrates the distance reading span. The Multiplier is shown by the values 1 - 1999, but these values are understood to represent 0.001 - 1.999. The default of 1000 (i.e. 1.000) is used for most applications.
40417 - Offset (Factory Calibrated)

Sets the Zero Reference of the sensor, the point from which the calculated distance is measured.

40418 - Pre filter

Defines the physical range (0 - 10,364 mm) of the start up (pre-filter) window. Four sample readings must be found within the Pre filter window for the MPX sensor to successfully start up. This register is used for factory diagnostics only.

40419 - Noise limit

Sets the limit for number of signals (0-255) outside the Pre filter range for the MPX at start up. If the Noise Limit is reached before four readings register within the Pre filter window, the MPX will not start up. This register is used for factory diagnostics only.

40420 - Temperature Select

Selects the temperature sensor reading to be displayed in Input Register 30302.

MPX-E/R4 sensors are limited to a single RTD sensor in the stem. Only options 0 and 8 work for the MPX-E/R4.

\[
\begin{align*}
0 &= \text{RTD} \\
1 &= \text{Digital Temperature Sensor A} \\
2 &= \text{Digital Temperature Sensor B} \\
3 &= \text{Digital Temperature Sensor C} \\
4 &= \text{Digital Temperature Sensor D} \\
5 &= \text{Digital Temperature Sensor E} \\
6 &= \text{Digital Temperature Sensor} \\
7 &= \text{Digital Temperature Sensor} \\
8 &= \text{Digital Temperature Sensor on Circuit Board}
\end{align*}
\]

NOTE: MPX-E1 and MPX-R1 legacy models will only work with option 0.

40421 - RTD Offset C° (Factory Calibrated)

Calibrates the RTD temperature sensor.
40422 - Float Window (Factory Calibrated)

Sets the distance (0 - 1000 mm) between the first (i.e. top) float and the point at which the sensor will begin looking for the second (bottom) float. 0 indicates a single float.

40423 - 1st Float Offset (Factory Calibrated)

Used to calibrate top float reading (-10,364 - 10,364 mm).

40424 - 2nd Float Offset (Factory Calibrated)

Used to calibrate bottom float reading (-10,364 - 10,364 mm).

40425 - Gain Offset (Factory Calibrated)

Used to move the centerline of the float response signal to optimize signal strength (0 - 255).

*These registers are not used by the MPX-E/R2 or MPX-E/R3, even though they are labeled in the APG Modbus software.
†Setting is factory calibrated. Do not adjust.
• MPX-E/R2 and MPX-E/R3 APG Modbus Sensor Parameters

40401 - Units

Determines the units of measure for the Calculated Reading when Application Type is set to 0, 1, or 7.

1 = Feet
2 = Inches
3 = Meters

For MPX-E/R2 and MPX-E/R3, this is seen only when using APG Modbus to program the MPX. This setting does not affect the 4-20 mA output.

40402 - Application Type

Determines the type of Calculated Reading performed by the sensor.

0 = Distance
1 = Level
2 = Standing Cylindrical Tank with or without Hemispherical Bottom
3 = Standing Cylindrical Tank with or without Conical Bottom
4 = Standing Rectangular Tank with or without Chute Bottom
5 = Horizontal Cylindrical Tank with or without Spherical Ends
6 = Spherical Tank
7 = Pounds (Linear Scaling)
8 = N/A
9 = Vertical Oval Tank
10 = Horizontal Oval Tank
11 = Strapping Chart

See MPX-E/R Modbus Application Type Parameters pages 26-30.

For the MPX-E/R2 and MPX-E/R3, the 4-20 mA output can be scaled for linear output over distance/level or scaled for linear output over volume. When setup in any of the volumetric application types, the 4-20mA output becomes linear with regards to the volume (linear mA change per gallon, liter, etc.)

40403 - Volume Units

Determines the units of measure for the Calculated Reading when Application Type is set to 2 - 6 or 9 -11.

1 = Feet³
2 = Million Feet³
3 = Gallons
4 = Meters³
5 = Liters
6 = Inches³
7 = Barrels

40404 - Decimal Place

Determines the number of decimal places included in the Calculated Reading(s). For MPX-E/R2 and MPX-E/R3, this is seen only when using APG Modbus to program the MPX. This setting does not affect the 4-20 mA output.
40405 - Maximum Distance (Factory Calibrated)

Sets the distance (beginning from the Zero Reference) to the point where the sensor will stop looking for float signals, usually the bottom of the stem. A float beyond the Maximum Distance value will not be detected.

40406 - Full Distance

Sets the positive distance (beginning from the sensor Zero Reference) to the point where the monitored vessel is considered full.

40407 - Empty Distance

Sets the positive distance (beginning from the Zero Reference) to the point where the monitored vessel is considered empty (usually the bottom of the stem).

40408 - Sensitivity (Factory Calibrated)

Sets the level of gain that is applied to the returning float signal.

40409 - Pulses (Factory Calibrated)

Controls the duration of the signal being sent down the magnetostrictive wire.

40410 - Blanking (Factory Calibrated)

Sets the blanking distance, which is the zone from the Zero Reference of the sensor to the point from which the first signal will be valid. Signals from a float in the blanking area will be ignored.

40411 - Fail Safe

Sets the output condition that the MPX will revert to in the event of a loss of return signal condition.

0 = Disable (no fail safe output)
1 = 3.8 mA
2 = 22 mA
40412 - Averaging (Factory Calibrated)

Sets the number of qualified received float signals to average for the raw reading. Qualified received signals are placed in a first-in, first-out buffer, the contents of which are averaged for the raw reading. The larger the number of qualified received signals being averaged, the smoother the reading will be, and the slower the reading will be to react to quickly changing targets.

40413 - Filter Window (Factory Calibrated)

Determines the physical range (0 - 10,364 mm) of qualified received signals, based on the current raw reading. Signals beyond the +/- Filter Window range of the current reading will not qualify unless the average moves. Signals outside the extents of the Filter Window are written to the Out of Range samples buffer (Holding Register 40414). See Figure 3.2.

Example:
Window = 300 mm
Out of Range Samples = 10

40414 - Out of Range Samples (Factory Calibrated)

Sets the number of consecutive samples outside the Filter Window (Holding Register 40413) necessary to automatically adjust the current reading and move the Filter Window.

40415 - Sample Rate (Factory Calibrated)

Sets the update rate the sensor (10 - 1000 ms). Shorter time delays allow for quicker sensor response times to changing levels. Typical setting is 200 ms. Settings under 200 ms are not recommended.
40416 - Multiplier (Factory Calibrated)

Calibrates the distance reading span. The Multiplier is shown by the values 1 - 1999, but these values are understood to represent 0.001 - 1.999. The default of 1000 (i.e. 1.000) is used for most applications.

40417 - Offset (Factory Calibrated)

Sets the Zero Reference of the sensor, the point from which the calculated distance is measured.

40418 - Pre filter

Defines the physical range (0 - 10,364 mm) of the start up (pre-filter) window. Four sample readings must be found within the Pre filter window for the MPX sensor to successfully start up. This register is used for factory diagnostics only.

40419 - Noise limit

Sets the limit for number of signals (0-255) outside the Pre filter range for the MPX at start up. If the Noise Limit is reached before four readings register within the Pre filter window, the MPX will not start up. This register is used for factory diagnostics only.

40421 - RTD Offset C° (Factory Calibrated)

Calibrates the RTD temperature sensor.

40422 - Float Window (Factory Calibrated)

Sets the distance (0 - 1000 mm) between the first (i.e. top) float and the point at which the sensor will begin looking for the second (bottom) float. This essentially functions as a secondary blanking distance for the minimum depth of the top fluid. Set to 0 for single float.
40423 - 1st Float Offset (Factory Calibrated)

Used to calibrate top float reading (-10,364 - 10,364 mm).

40424 - 2nd Float Offset (Factory Calibrated)

Used to calibrate bottom float reading (-10,364 - 10,364 mm).

40425 - Gain Offset (Factory Calibrated)

Used to move the centerline of the float response signal to optimize signal strength (0 - 255).

40426 - 4mA Set

Used to set the distance which will correspond to an output of 4 mA. For Application 1 (Distance), this is measured from the Zero Reference. For all other applications (Level & Volumetric) this is measured from the bottom of the probe.

40427 - 20mA Set

Used to set the distance which will correspond to an output of 20 mA. For Application 1 (Distance), this is measured from the Zero Reference. For all other applications (Level & Volumetric) this is measured from the bottom of the probe.

40428 - 4mA Cal (Factory Calibrated)

Used to calibrate the 4 mA output of the MPX-E/R2 or -E/R3.

40429 - 20mA Cal (Factory Calibrated)

Used to calibrate the 20 mA output of the MPX-E/R2 or -E/R3.

Chapter 4: Maintenance

• General Care

Your MPX level sensor is designed to be low maintenance. However, in general, you should:
• Periodically inspect your MPX to ensure the stem and floats are free of any heavy buildup that might impede the movement of the floats.
• Ensure the housing cover is snugly secured. If the cover becomes damaged or is misplaced, order a replacement immediately.

• Repair and Returns

The MPX-E Chemical’s chemical resistant coating is a durable thermoplastic. This means that if damage occurs, repair is possible:
• Use a heat gun on a low setting to heat the damaged location until coating becomes soft and malleable. If coating begins to ripple or bubble, too much heat has been applied.
• With a blunt object, gently smear the coating to recover the damaged area.
• Allow chemical resistant coating patch to cool before reinstalling probe.
• Keep MPX-E Chemical probe and chemical resistant coating away from flammable material during repair.

**NOTE:** If the damaged area is greater than 0.1”, it is recommended to use a supplemental patch of chemical resistant coating.

Should your MPX level sensor require service, please contact the factory via phone, email, or online chat. We will issue you a Return Material Authorization (RMA) number with instructions.

• Phone: 888-525-7300
• Email: sales@apgsensors.com
• Online chat at www.apgsensors.com

Please have your part number and serial number available. See Warranty and Warranty Restrictions for more information.

**IMPORTANT:** All repairs and adjustments of the MPX level sensor must be made by the factory. Modifying, disassembling, or altering the MPX, other than patching the chemical resistant coating on an MPX-E Chemical probe, is strictly prohibited.
Installation in: Class I, Division 1 & 2 Groups C and D, Max. Temp. 85°C
Ex d II B; Ex nA II B
Class I, Zone 1; AEx d II B; Class I, Zone 2; AEx nA II B

**HAZARDOUS AREA**

Non-Incendive Wiring

- Certified Associated Non-incendive Field wiring Apparatus

OPEN CIRCUIT BEFORE REMOVING COVER or KEEP COVER TIGHT WHILE CIRCUITS ARE ALIVE and
AVERTISSEMENT: OUVRIR LE CIRCUIT AVANT D'ENLEVER LE COUVERCLE, ou GARDER LE COUVERCLE BIEN FERME TANT QUE LES CIRCUITS SONT SOUS TENSION

Certificate of Compliance

Certificate: 2397437 (237484) Master Contract: 237484
Project: 70022593 Date Issued: 2016-04-22
Issued to: Automation Products Group Inc
1025 West 1700 North
Logan, Utah 84321
USA
Attention: Karl Reid

The products listed below are eligible to bear the CSA Mark shown with adjacent indicators 'C' and 'US' for Canada and US or with adjacent indicator 'US' for US only or without either indicator for Canada only.

Issued by: Ravindra (Ravi) Kanthe

PRODUCTS
CLASS - C225802 - PROCESS CONTROL EQUIPMENT-For Hazardous Locations-
CLASS - C225882 - PROCESS CONTROL EQUIPMENT-For Hazardous Locations - Certified to US Standards

Class I, Division 1 & 2, Groups C and D
Ex d IIB
Ex nA IIB
Class I, Zone 1; AEx d IIB
Class I, Zone 2; AEx nA IIB

- Float Level Sensors, Model MPX- E, R, G &T (MPX- abc-de-fghi-jjj), rated 12 - 24 Vdc, 80mA, or rated 12 to 24 Vdc, 4-20mA; operating ambient Ta is 85°C; Temperature Code T4; Ingress protection IP65; Field wiring is non-incendive when installed per drawing 9003468.

Class I, Division 2, Groups C and D
Ex nA IIB
Class I, Zone 2; AEx nA IIB
- Float Level Sensors, Model MPX-F (model MPX-abc-de-fghi-jjj), rated 12 - 24 Vdc, 80mA, or rated 12 to 24 Vdc, 4-20mA; operating ambient Ta is 85°C; Temperature Code T4; Ingress protection IP65; Field wiring is non-incendive when installed per drawing 9003468

Notes for all equipment:

1. The model code breakdown is as follows: a=E, R, G or T; b=1, 2, 3 or 4; c=A, B or C, d=A, B, C, D, E, F, G, Z, X, V, T, R, M, or J; e=N, B, D, Y, W, U, S, P, L, K, or I; f=F, R, P, S, N, or O; g=1, 1.5, 2, 2.5, 3, 3.5, 4, 5, 6; h=W or S; i=A, B, C or D; and j=12–153 for the 1/2" stem Type E or 48–300 for the 1" stem Type R, Type G and Type T or 120-456 for Flex stem Type F.

2. The equipment is intended to be installed as required by the applicable electrical code (CEC, NEC) and as specified by the manufacturers Installation Instructions.

3. The installation will be inspected by the authority with jurisdiction in the area where installed.
