Introduction

Thank you for purchasing an LOE Ultrasonic Level Sensor and Web Enabled Controller from APG. We appreciate your business! Please take a few minutes to familiarize yourself with your LOE and this manual.

The LOE Ultrasonic Level Sensor and Web Enabled Controller offers a wide degree of integrated, flexible, remote and local control and monitoring for your system. The LOE can control up to 10 APG Modbus sensors--any combination of level, pressure, magnetostrictive and ultrasonic--and two input or output relay terminals. All readings are available for control and monitoring via TCP/IP for local or remote network access. The LOE also had flexible power options: it can use either POE or an independent 12-28 VDC power source.

Reading your label
Every APG controller comes with a label that includes the controller's model number, part number, and serial number. The LOE label also indicates the default IP address, subnet mask, and mac address. Please ensure that the model number on your label matches your order.
Warranty and Warranty Restrictions

This product is covered by APG’s warranty to be free from defects in material and workmanship under normal use and service of the product for 24 months. For a full explanation of our Warranty, please visit https://www.apgsensors.com/about-us/terms-conditions. Contact Technical Support to receive a Return Material Authorization before shipping your product back.

Scan the QR code below to read the full explanation of our Warranty on your tablet or smartphone.
Chapter 1: Specifications and Options

• Dimensions

LOE-2126, LOE-6126

LOE-3136
• **Specifications**

**Performance**

- **Operating Range**
  - 0.6 - 15.0 ft. / 7 in. - 180 in. / 178mm - 4572mm (6126)
  - 1.0 - 25.0 ft. / 12 in. - 300 in. / 305mm - 7620mm (2126)
  - 1.5 ft. - 40 ft. / 18 in. - 480 in. / 458mm - 12192mm (3136)

- **Beam Pattern**
  - 9° off axis

- **Transducer Frequency**
  - 43 kHz (3136) / 69 kHz (2126, 6126)

- **Response Time**
  - Programmable, 5 Hz maximum (200 ms)

**Communications**

- **Digital Output**
  - Ethernet TCP/IP Modbus
  - Ethernet TCP/IP via embedded webserver (LAN only)
  - Ethernet TCP/IP to APG-provided website
  - 0-2 Isolated Solid State Relays

- **Inputs**
  - RS-485 Modbus (up to 10 slave sensors)
  - 0-2 Discrete Switches

**Electrical**

- **Operational Supply Voltage (at sensor)**
  - 48 VDC via POE (requires injector or switch)
  - 12-28 VDC

- **Current Draw**
  - 40 mA @ 48 VDC
  - 80 mA @ 24 VDC

- **Power Rating (LOE)**
  - 2.0 W Max

- **Isolated SS Relays**
  - 120V, 120 mA Max

**Accuracy**

- **Accuracy**
  - ±0.25% of detected range

- **Resolution**
  - 0.1 inch (2.54 mm)

**Environmental**

- **Operating Temperature**
  - -40 to 60°C (-40 to 140°F)

- **Internal Temperature Compensation**
  - Yes

- **Enclosure Protection**
  - IP65

**Materials of Construction**

- **Transducer Housing**
  - PVDF

- **Upper Housing**
  - PC/PET

- **Transducer Type**
  - Ceramic, PVDF faced
Mounting
LOE-2126     2" Ø NPT
LOE-3136     3" Ø NPT
LOE-6126     2" Ø NPT

Compatible APG Modbus Sensors
Ultrasonic     MNU
Magnetostrictive    MPX-E1, MPX-R1
Pressure     PT-400-L5, PT-400-L31, PT-500-L5, PT-500-L31
Controllers     DCR-1006A, MND

•  Model Number Configurator

Model Number: LOE - _____ - _____
   A      B

A. Model
☐ 2126     1 - 25 ft. (305mm - 7620mm); 69 kHz; 2" NPT threads
☐ 3136     1.5 - 40 ft. (458mm - 12192mm); 43 kHz; 3" NPT threads
☐ 6126     0.6 - 15 ft. (178mm - 4572mm); 69 kHz; 2" NPT threads

B. Relay Configuration
☐ 0000     2 relay outputs
☐ 0010     1 relay output, 1 switch input
☐ 0110     2 switch inputs
System Wiring Diagrams

External 12-28 VDC Source Wiring

![Diagram showing external 12-28 VDC source wiring](image)

POE (Power over Ethernet) Wiring

![Diagram showing POE power injector and terminal inside housing powering Modbus devices](image)

NOTE: Power terminals for 24V and GND can only be used to power Modbus sensors if LOE is powered via POE. If LOE is powered via 12-28 VDC supply, Modbus sensors must be powered independently.

Terminal inside housing supplies 24 Vdc to power attached Modbus devices when powering the LOE from a POE source.
Modbus Sensor Daisy-chain Wiring

**NOTE:** Power terminals for 24V and GND can only be used to power Modbus sensors if LOE is powered via POE. If LOE is powered via 12-28 VDC supply, Modbus sensors must be powered independently.

- Use shielded cable
- Trunk Line
- Sensor Line Drops
- 270 Ω terminating resistor at last sensor

**Note:** Terminating resistor size recommended based on input resistance of LOE. Length of cable and overall impedance of network may necessitate a different size resistor.
System Overview - LOE with Modbus network, SSR's and Internet Connection

Connection to Internet

Modbus Input

Solid State Relays
Chapter 2: Installation and Removal Procedures and Notes

• Tools Needed

  • Flat head screwdriver to remove knockouts for cables.
  • If you are using a stand pipe to mount your LOE, you will probably need tools to install the stand pipe.
  • For any attached Modbus sensors, please consult each sensor’s user manual for installation notes and instructions.

NOTE: For any APG sensor user manual, please visit http://apgsensors.com/support.

• Connection Notes

  • Up to 10 Modbus sensors can be connected to the LOE in any combination.
  • Output SSR’s are rated for 120V, 120mA max.

IMPORTANT: Each Modbus sensor must be connected to the network individually and assigned a unique Sensor Number before the next sensor can be added.

• Electrical Installation

  • Use flat head screwdriver to remove knockouts on either side of LOE housing.
  • Insert included cable fittings in knockout holes.
  • Connect any relays first.
  • Connect LOE to Ethernet/network.
  • Connect independent 12-28 VDC supply if not using POE.
  • Connect and set up one Modbus sensor at a time.

IMPORTANT: Multiple Modbus sensors added to the network simultaneously are all assigned the same Modbus address/sensor number: 1. Sensors MUST be added to the network individually.
• **Installation Notes**

  • Mount your LOE sensor so that it has a clear, perpendicular sound path to the surface being monitored. Your sensor should be mounted away from tank or vessel walls and inlets. (See Figure 2.1)
  • The sound path should be free from obstructions and as open as possible for the 9° off axis beam pattern.
  • If you are using a stand pipe, please see our guide to stand pipes on our website: [http://www.apgsensors.com/about-us/blog/how-to-install-a-stand-pipe](http://www.apgsensors.com/about-us/blog/how-to-install-a-stand-pipe).

![Figure 2.1](image)

• **Mounting Instructions**

Mounting your LOE is easy if you follow a few simple steps:

  • Never over-tighten the sensor.
  • Always screw in your sensor by hand to avoid cross-threading. Thread failure can be a problem if you damage threads by over-tightening them or by crossing threads.

⚠️ **IMPORTANT:** Do not over tighten! The sensor should be threaded in only hand tight.

⚠️ **NOTE:** Do not mount the sensor where the beam will intersect objects such as fill streams, pipes, ladder rungs, wall seams, or corrugated tank walls.
• **Software Setup**

Initial setup of the LOE and individual Modbus sensors is done via an embedded web server. The embedded server can be accessed by using either the serial number or local IP address of the LOE and a web browser (Internet Explorer, Chrome, Firefox, etc).

⚠️ **NOTE:** Port 6700 must be open on your local network for the LOE to connect.

**Accessing LOE Embedded Web Server via Serial Number**

The easier way to access the embedded web server is to type loe_xxx into a web browser on a computer connected to the same local network as the LOE. xxx represents the numeric portion of the LOE’s serial number. See Figures 2.2 and 2.3.

⚠️ **NOTE:** If your web browser performs a web search for “loe_xxx” instead of accessing the server, type “http://loe_xxx”.

Some networks will block this direct access to the LOE. If this is the case, you will need to use the IP address of your LOE to access the embedded web server. The IP address can be obtained two ways: ask your local network administrator, or logon to your APG-provided website, [www.levelandflow.com](http://www.levelandflow.com).
Accessing LOE Embedded Web Server via Local IP Address

Log on to your APG-provided website, and a list of sites will be displayed on your screen (see Figure 2.4). Select the site where the new LOE is installed. From the list of sensors at this site, select the sensor with the serial number that matches the new LOE. (See Figure 2.5)
On the Sensor Information screen you will see the IP Address of the newly installed LOE. (See Figure 2.6.)

Type the LOE's IP address into your browser's address bar (See Figure 2.7).

NOTE: For further information on using your APG-provided remote website, please visit www.apgsensors.com/support for a user manual, or contact us at 1-888-525-7300.

Logging on to the LOE Embedded Web Server

The LOE's embedded webpage should now be open, showing the Main Display page (See Figure 2.8). This page lists the LOE, any Modbus sensors attached to the LOE, and displays each sensor's current reading. The LOE is displayed as sensor #11. The configured sensor number for each Modbus sensor will show as its Sensor Number. Every new Modbus sensor defaults to sensor number 1.

IMPORTANT: Multiple Modbus sensors added to the network simultaneously are all assigned the same sensor number: 1. Sensors must be added to the network individually.
Click on Home to bring up the Menu page (See Figure 2.9). The first menu link clicked during each session will prompt a User Name and Password login for the LOE (See Figure 2.10). The default User Name is **admin**, and the default Password is **password**.

![Embedded WEB Server](image)

**Figure 2.9**

![User Name and Password](image)

**Figure 2.10**

⚠️ **NOTE:** See the Security Setting Menu (Page 37) to change this user name and password.

**Assigning Modbus Sensor Numbers**

Click on RS-485 Network Settings to bring up the RS485 Settings page (See Figure 2.11). See section RS-485 Network Settings for a full description of each parameter in this menu (Page 38).

![RS-485 Network Settings](image)

**Figure 2.11**
Change *Numb of Sensors On Line* to reflect the **total** number of Modbus sensors you will be connecting to your LOE. Click Change (or press Enter) to send the new value to the LOE.

With *Sensor Number to View* set to 1 (for the latest sensor added to the Modbus network), set *New Sensor Number* to the highest available number. Click Change (or press Enter) to send the new value to the LOE.

Repeat this process for each Modbus sensor as it is added to the network.

**NOTE:** If you control the power to each Modbus sensor separately, powering up a new sensor after assigning a Modbus address to the previous sensor will allow you to assign an address to the new sensor without leaving the RS845 Settings Menu.

**IMPORTANT:** None of parameters in the RS485 Settings menu automatically update. Each one must be manually configured.

**• Removal Instructions**

- Disconnect power to the LOE first.
- Disconnect network connection.
- Disconnect any sensors, relays, and switched inputs.
- Remove the LOE and store it in a dry place, at a temperature between -40° F and 180° F.
Chapter 3: Programming with Modbus TCP/IP

- **Modbus Polling via Ethernet with Modbus TCP/IP**

Using the LOE’s IP address, and port number 502, readings can be polled from the LOE for any attached sensors via RS-485 Modbus commands. Up to 14 16-bit Input Registers, beginning with register 299, can be polled with a single command. Below is a sample Modbus command illustrating the necessary syntax.

Example:
- 00 01: Transaction Identifier
- 00 00: Protocol Identifier
- 00 06: Message Length (6 bytes to follow)
- 0B: The Reporting Unit Identifier [sensor number] (0B hex = 11)
- 04: The Function Code (04 = read Input Registers)
- 01 2E: The Data Address of the first register requested. (12E hex + 1 = 303)
- 00 02: The total number of registers requested. (read 2 registers, i.e. 303 to 304)

Byte order (hex values)
- 00 01 00 00 00 06 0B 04 01 2E 00 02

Notes:
- Reporting Unit indicates the sensor reading being polled from the LOE, in hex. 01 - 0A are for Modbus sensors 1 - 10 attached to the LOE. 0B (i.e. sensor 11) reads the values from the LOE sensor (See Figure 2.8). Unused registers (i.e., those not associated to an attached sensor) will return zeros when polled.

- Function Code 04 reads the Input Registers. No other functionality (e.g., polling from or writing to Holding Registers) is supported via Modbus TCP/IP with the LOE. Complete control functionality is available through the embedded web server and through your APG-provided website (www.levelandflow.com).

- Data Address of registers, decimal to “hex minus 1” conversion:

<table>
<thead>

</table>

This is the list of generic Input Registers for polling the LOE and any connected sensors. Actual registers used vary by sensor. Please see the user manual for each sensor for a full and accurate list of registers.

⚠️ NOTE: For more information about Modbus RTU, please visit www.modbus.org.
• **Modbus Programming of Individual Sensors**

The LOE does NOT support full Modbus programming of attached sensors. Full control and configuration of individual sensors is supported through the LOE’s embedded web server and through your APG-provided webpage, www.levelandflow.com.

![NOTE: For any APG sensor user manual, please visit http://apgsensors.com/support.](image)

**Chapter 4: LOE Embedded Web Server**

• **Accessing the LOE Embedded Web Server**

See the Software Setup section of chapter 2 (pages 9 - 11) for instructions for accessing and signing into the LOE embedded web server.

• **Navigating the LOE Embedded Web Server**

The LOE embedded web server has two primary screens--the Main Display Page (Figure 4.1) and Menu Page (Figure 4.2)--and a screen for each of 9 submenus. The submenus can be understood in three groups:

- **LOE Sensor Input Configuration Submenus**
  - Application Parameters
  - Basic Parameters
- **Modbus Sensor Configuration Registers**
  - RS-485 Modbus Input Reg
  - RS-485 Modbus Holding 1
  - RS-485 Modbus Holding 2
- **LOE Utility Menus**
  - Network
  - Security
  - Label
  - RS-485 Network Settings

The Menu Page also has a link back to the Main Display Page.
<table>

Version 5.0.2

**Figure 4.2**
• LOE Sensor Configuration Submenus

LOE Application Parameters

The Application Parameters menu configures the application-specific parameters applied to the calculated reading from the LOE sensor.

<table>
<thead>
<tr>
<th>PARAMETER</th>
<th>RANGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Units</td>
<td>1 - feet</td>
</tr>
<tr>
<td></td>
<td>2 - inches</td>
</tr>
<tr>
<td></td>
<td>3 - meters</td>
</tr>
</tbody>
</table>

Units is used to select the units of measurement for distance or level applications. The units will also determine the resolution of Basic and Application Parameters. The resolution is: feet 0.01, inches 0.1, and meters 0.001.

<table>
<thead>
<tr>
<th>PARAMETER</th>
<th>RANGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Decimal Place</td>
<td>0 - 3</td>
</tr>
</tbody>
</table>

Decimal Place determines the number of decimal places shown on the output reading (see Figure 4.1). As the output reading is used for setting/evaluating Trip Distance and Window, the Decimal Place setting applies to those parameters as well.
**PARAMETER**  **RANGE**

*Full Distance*  0 - Sensor Maximum

*Full Distance* sets the distance from the LOE sensor Zero Point (See Figures 4.5 - 4.7) to the full level of the vessel being monitored. Not used when Application Type is set to 0 (Value).

**PARAMETER**  **RANGE**

*Empty Distance*  0 - Sensor Maximum

*Empty Distance* sets the distance from the LOE sensor Zero Point (See Figure 4.5 - 4.7) to the empty level of the vessel being monitored. Not used when Application Type is set to 0 (Value).

**PARAMETER**  **RANGE**

*Application Type*  0 = Value (Distance)  
1 = Level  
2 = Volume of Standing Cylindrical Tank with or without Hemispherical Bottom  
3 = Volume of Standing Cylindrical Tank with or without Conical Bottom  
4 = Volume of Standing Rectangular Tank with or without Chute Bottom  
5 = Volume of Horizontal Cylindrical Tank with or without Spherical Ends  
6 = Volume of Spherical Tank  
7 = Pounds (Linear Scaling)  
8 = User Defined Units  
9 = Volume of Vertical Oval Tank  
10 = Volume of Horizontal Oval Tank  
11 = Polynomial (Strapping Chart)

*Application Type* is used to choose the parameter configuration to convert the distance of *Distance* into the configured reading on the Main Display Page (See Figure 4.1; also, *Calc Dist, Level, Volume* on Figure 4.4). After selecting an *Application Type* and clicking “Change” or pressing Enter, the Application Parameters menu updates to reflect the parameters of the chosen application.

See *Tank Parameters* for an explanation of each *Application Type* and its associated parameters.

**PARAMETER**  **RANGE**

*Volume Units*  1 = Feet$^3$  
2 = Million Feet$^3$  
3 = Gallons  
4 = Meters$^3$  
5 = Liters  
6 = Inches$^3$  
7 = Barrels

*Volume Units* selects the units of measure for the configured reading on the Main Display Page (See Figure 4.1) when a volumetric application is selected. The settings is not used when the Application Type is set to 0, 1, 7, or 8.
# Tank Parameters

<table>
<thead>
<tr>
<th>Application Type</th>
<th>Tank Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 - Distance</td>
<td>Parameter 1</td>
<td>Not Used</td>
</tr>
<tr>

<td>Not Used</td>
</tr>
<tr>
<td></td>
<td>Parameter 4</td>
<td>Not Used</td>
</tr>
<tr>
<td></td>
<td>Parameter 5</td>
<td>Not Used</td>
</tr>
</tbody>
</table>

*Distance* (factory default) measures the distance from the Zero Point of the LOE sensor to the target surface.

<table>
<thead>
<tr>
<th>Application Type</th>
<th>Tank Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - Level</td>
<td>Parameter 1</td>

### Application Type 6 - Spherical Tank

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parameter 1</td>
<td>Tank Diameter</td>
</tr>
<tr>
<td>Parameter 2</td>
<td>Not Used</td>
</tr>
<tr>
<td>Parameter 3</td>
<td>Not Used</td>
</tr>
<tr>
<td>Parameter 4</td>
<td>Not Used</td>
</tr>
<tr>
<td>Parameter 5</td>
<td>Not Used</td>
</tr>
</tbody>
</table>

### Application Type 7 - Pounds (Linear Scaling)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parameter 1</td>
<td>Multiplier</td>
</tr>
<tr>
<td>Parameter 2</td>
<td>Unit Definition (label)</td>

<tr>
<td>Parameter 3</td>
<td>Not Used</td>
</tr>
<tr>
<td>Parameter 4</td>
<td>Not Used</td>
</tr>
<tr>
<td>Parameter 5</td>
<td>Not Used</td>
</tr>
</tbody>
</table>

*Pounds* allows for a multiplier (*Parameter 1*) to be applied to the calculated level measurement, creating a linear scalar as the output to configured reading on the Main Display Page. Such a multiplier could convert the distance or level measurement of a tank with simple geometry into a measurement of weight.

### Application Type 8 - User Defined Units

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parameter 1</td>
<td>Not Used</td>
</tr>
<tr>
<td>Parameter 2</td>
<td>Not Used</td>

Figure 4.4
### PARAMETER | RANGE
--- | ---
**Sensitivity** | 0 - 100%

*Sensitivity* sets the level of gain that is applied to the echo. When operating in AutoSense, Hard-Target, or Soft-Target (see *Gain Control*), *Sensitivity* sets an upper limit for the amplification that can be applied to the echo. If operating in Manual, this parameter sets the gain.

When using manual gain control, set *Sensitivity* to the minimum value that will allow the target to be reliably tracked through the full range of expected environmental conditions.

**IMPORTANT:** Parameter values stored on the LOE will not update until the “Change” button is clicked or the Enter key is pressed.

### PARAMETER | RANGE
--- | ---
**Blanking** | Determined by sensor model

*Blanking* sets the blanking distance, which is the zone from the Zero Point of the sensor to the point from which the first echo will be accepted. While blanking distance can be used to ignore unwanted targets--such as welds, seams, pipe fittings, or gaskets--between the sensor and the closest acceptable target level, such objects generally create additional reflections and echoes, which are hard to filter out. More often, blanking distance is used for a sensor installed in a stand pipe.

Because of the physical properties of an ultrasonic sensor, objects cannot be detected closer than approximately 1 foot from the face of most transducers (5 inches for LOE-7126, 7 inches for LOE-6126). However, this distance varies according to how much energy is being transmitted (*Pulses*) and the installation.

**IMPORTANT:** *Blanking* is always measured from the Zero Point of the sensor. See Figures 4.5 - 4.7.
PARAMETER | RANGE
--- | ---
Pulses | 0-20

_Pulses_ sets the maximum number of pulses the sensor can transmit when operating in AutoSense, Hard-Target, or Soft-Target (see _Gain Control_), or sets the number of pulses when operating in Manual. The more pulses that are sent in a burst, the stronger the returning echo.

When operating in Manual, increase the strength of the transmission by increasing _Pulses_ for detecting soft targets in damping environments. In acoustically active environments or small enclosed areas, decrease _Pulses_ to reduce multiple echoes.

PARAMETER | RANGE
--- | ---
Gain Control | 0 = Manual
 | 1 = AutoSense
 | 2 = Hard-Target
 | 3 = Soft-Target
 | 4 = Auto-Soft Target
 | 5 = Auto-Hard Target

_Gain Control_ selects the control mode for the LOE sensor’s gain settings (_Sensitivity_ and _Pulses_). In AutoSense, the sensor automatically adjusts the sensitivity and pulses for the best quality return signal. Manual, Hard Target, and Soft Target are user controlled scenarios. In Manual, the user is in full control of _Sensitivity_ and _Pulses_. For Hard and Soft Target, the user sets maximum _Sensitivity_ and _Pulses_, but the overall gain is either ramped up slowly (Hard Target) or quickly (Soft Target) by the sensor.

PARAMETER | RANGE
--- | ---
Average | 1-32

_Average_ sets the number of qualified samples to average for the displayed reading. Qualified samples are placed in a first-in, first-out buffer, the contents of which are averaged for _Distance_. The larger the number of qualified samples being averaged, the smoother the _Distance_ reading will be, and the slower the reading will be to react to quick changes.
**PARAMETER**   **RANGE**

*Window*  
0 - Sensor Maximum

*Window* determines the corresponding physical range for qualified samples, based on the current *Distance*. Samples beyond the +/- *Window* range of the current *Distance* will not qualify unless the average moves. Samples outside the extents of the *Window* are written to the *Out of Range Samples* buffer. (See Figure 4.8.)

---

**Example:**

Window = 6 Inches  
Out of Range Samples = 10

---

**PARAMETER**   **RANGE**

*Out of Range Samples*  
0-250

*Out of Range Samples* sets the number of consecutive samples outside the *Window* necessary to automatically adjust the current *Distance* and move the *Window*.

---

**PARAMETER**   **RANGE**

*Sample Rate*  
1 - 20 Hz

*Sample Rate* is the number of sample readings taken by the LOE every second.

---

**PARAMETER**   **RANGE**

*Multiplier*  
0 - 1.999

*Multiplier* is used to calibrate the LOE sensor for variations in the speed of sound due to variations in atmospheres. The default of 1.000 is used for most applications.

---

**PARAMETER**   **RANGE**

*Temp Comp.*

0 = Off  
1 = On

*Temperature Compensation* activates or deactivates the LOE's internal temperature compensation circuit. The speed of sound changes with changes in temperature, therefore changes in temperature can affect distance measurements. These effects can be minimized by activating temperature compensation.
**PARAMETER**  
**RANGE**

*Offset*  
-10 ft - +10 ft

*Offset* is used to change the Zero Point of the LOE sensor. The Zero Point of the sensor is the point from which the calculated distance is measured. When the Offset is set to 0, the Zero Point of the sensor is at the face of the transducer (See Figure 4.5). A positive setting will move the Zero Point forward, in front of the sensor face (See Figure 4.6). Setting the Offset to a negative number will move the Zero Point backward, behind the sensor face (See Figure 4.7).

In all cases, Blanking is measured from the end of Offset, and the effective measurement zone of the sensor begins at the forward end of Blanking. If Offset is more negative than Blanking is positive, the net difference will be a loss in sensor maximum range (See Figure 4.7).

**PARAMETER**  
**RANGE**

*Max Distance*  
Determined by sensor model

*Maximum Distance* sets the maximum acceptable signal range (up to the physical maximum of the sensor), measured from the Zero Point. Signals beyond the *Maximum Distance* are ignored. Under Loss of Echo conditions, the *Distance* reading will display the *Maximum Distance*.

### LOE Readings

<table>
<thead>
<tr>
<th>Reading Type</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance</td>
<td>0.00-15.00 Feet</td>
</tr>
<tr>
<td>Calc Dist, Level, Volume</td>
<td>Gallons</td>
</tr>
<tr>
<td>Signal Strength</td>
<td>0-100 (100=Best), Puls, Sens, Blank (Feet)</td>
</tr>
<tr>
<td>Temperature</td>
<td>Readout in Celsius</td>
</tr>
</tbody>
</table>

*Figure 4.9*

<table>
<thead>
<tr>
<th>Reading Type</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance</td>
<td>Determined by model</td>
</tr>
</tbody>
</table>

*Distance* displays the distance from the sensor to the detected target in the units selected in the *Units* parameter in the Application Parameters Menu (See Figure 4.3). This reading is always Distance, regardless of the *Application Type* selected in the Application Parameters Menu. *Distance* is used for *Average* and *Window*.

<table>
<thead>
<tr>
<th>Reading Type</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calc. Dist, Level, Volume</td>
<td>Determined by vessel being measured</td>
</tr>
</tbody>
</table>

*Calc. Dist, Level, Volume* displays the configured output of the sensor. This is also shown on the Main Display. *Calc. Dist, Level, Volume* is used for Trip measurements.
The LOE can have up to 2 output relays that can be configured to turn on or off based on the \textit{Calc. Dist, Level, Volume} reading of the sensor.

Trip Type Outputs are configured with two independent digits: the first for Alarm Type (Blank, 1, or 2), and the second for Trip Condition (0-5, 7, or 9).

**PARAMETER** | **RANGE**
--- | ---

\textit{Trip Distance} | 0 - Sensor Max Distance

\textit{Trip Distance} sets the value of the primary trip position, which is closest to the Zero Point of the sensor.

\textit{PARAMETER} | **RANGE**
--- | ---

\textit{Trip Window} | 0 - Sensor Max Distance

\textit{Trip Window} sets the value from the primary trip position to the secondary trip position, which is farther from the sensor's Zero Point.

**Alarm Type**

\textit{Blank} - No Alarm

Designates that no alarm is to be activated or deactivated on the remote APG-provided website (i.e., \url{www.levelandflow.com}) for the indicated Trip Condition. To initiate only the visual Trip Status indicator (See Figure 4.11) for Trip Condition 3, \textit{Trip Type} would be set to 3.
Alarm Type
1 - Active Alarm

Designates the active trip point as a web alarm condition. To initiate a web alarm whenever the Trip Condition 3 is ON, Trip Type would be set to 13.

Alarm Type
2 - Inactive Alarm

Designates an inactive trip point as a web alarm condition. To initiate a web alarm whenever the Trip Condition 3 is OFF, Trip Type would be set to 23.

Trip Condition
0 - Near

Near activates the Trip whenever the Calc. Dist,Level,Volume is less than the Trip Distance setting.

Trip Condition
1 - Exclusive

Exclusive activates the Trip whenever the Calc. Dist,Level,Volume is less than the Trip Distance setting OR greater than the Trip Distance + Trip Window settings.

Trip Condition
2 - Hysteresis Near

Hysteresis Near activates the Trip whenever the Calc. Dist,Level,Volume becomes less than the Trip Distance setting. The Trip remains activated until the Calc. Dist,Level,Volume becomes greater than the Trip Distance + Trip Window settings. The Trip then remains off until the Calc. Dist,Level,Volume becomes less than the Trip Distance setting again.

Trip Condition
3 - Far

Far activates the Trip whenever the Calc. Dist,Level,Volume is greater than the Trip Distance setting.

Trip Condition
4 - Inclusive

Inclusive activates the Trip whenever the Calc. Dist,Level,Volume is greater than the Trip Distance setting AND less than the Trip Distance + Trip Window settings.
### Trip Condition

**5 - Hysteresis Far**

Hysteresis Far activates the Trip whenever the Calc. Dist, Level, Volume becomes greater than the Trip Distance + Trip Window settings. The Trip remains activated until the Calc. Dist, Level, Volume becomes less than the Trip Value setting. The Trip remains off until the Calc. Dist, Level, Volume becomes greater than the Trip Distance + Trip Window settings again.

**Trip Condition**

**6 - Disable Trip Relay**

6 - Disable Trip Relay de-activates the Trip or SS Relay output.

**Trip Condition**

**7 - Loss of Echo**

Loss of Echo activates the output when the maximum calculated reading is reached.

**Trip Condition**

**8 - Timed Interval**

Timed Interval activates the output for a set amount of seconds every set amount of minutes (See Figure 4.13). When Trip Type is set to 8, Trip Distance and Trip Window are changed to “Interval Time (minutes)” and “On Time (seconds)”.

**Trip Condition**

**9 - Abrupt Change**

Abrupt Change activates the output whenever a user-defined maximum rate of level change (change in distance or level divided by elapsed time) is exceeded. Trip Distance defines the distance and Trip Window defines the time.
The LOE can have up to 2 input relays that can be tied to alarms on the remote APG-provided website. There are three alarm configurations for Trip Inputs: Alarm On on Input, Alarm Off on Input, and Relay On Time Check Limit.

**Alarm Type**

18 - Alarm on ON Trip Input

*Alarm on ON Trip Input* activates the alarm when the input circuit is closed.

**Alarm Type**

28 - Alarm on OFF Trip Input

*Alarm on OFF Trip Input* activates the alarm when the input circuit is opened.

**Alarm Type**

30 - Relay On Time Check Limit

*Relay On Time Check Limit* generates an alarm when the input circuit has been closed past the time limit (in seconds) set in the Trip Dist (See Figure 4.14). Trip Window contains a running counter of the time (in seconds) the input circuit has been closed. The counter is cleared when the input circuit opens.
External Website Communication Status

The LOE embedded web server includes one parameter, a button, and two status reports for communication with the remote APG-provided website (i.e., www.levelandflow.com).

<table>
<thead>
<tr>
<th>PARAMETER</th>
<th>RANGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Retry Time</td>
<td>30 - 180 Seconds</td>
</tr>
</tbody>
</table>

*Retry Time* sets the time delay (in seconds) between attempts by the LOE to contact the external website.

**BUTTON**

- **Call In**

*Call In* forces the LOE to call in to the external website.

<table>
<thead>
<tr>
<th>DISPLAY</th>
<th>RANGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remote Call in Time</td>
<td>1 - 86400 Seconds</td>
</tr>
</tbody>
</table>

*Remote Call in Time* displays the duration of the last communication between the LOE and the external website.

<table>
<thead>
<tr>
<th>DISPLAY</th>
<th>RANGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remote Bytes</td>
<td>8 or 160 Bytes</td>
</tr>
</tbody>
</table>

*Remote Bytes* displays the number of bytes of data sent in the last communication between the LOE and the external website. 8 bytes indicates a normal, successful transmission. 160 bytes indicates an error occurred in the transmission.
• **Modbus Sensor Configuration Registers**

**RS-485 Modbus Input Registers**

![Modbus Input Registers Sensor #1 Comm Good](image)

This display-only menu shows the contents of the Input Registers for the selected Modbus sensor (See Figure 2.8). Registers used vary by sensor type. Please see the user manual for each sensor for a full list of registers.

- Detected Sensor Type Number and Sensor Model Number List:

Note: This list represents sensors that interface with various APG Modbus software packages. Not all interface with the LOE.
This menu shows the contents of the first set of Holding Registers for the selected Modbus sensor (See Figure 2.8). The register names and value restrictions are automatically configured for the type of sensor detected (See Figure 4.16). Because register name and use varies by sensor, including a full breakdown of the registers in this manual would be counterproductive. Please see the user manual for each sensor for a full list of registers.
This menu shows the contents of the second set of Holding Registers for the selected Modbus sensor (See Figure 2.8). The register names and value restrictions are automatically configured for the type of sensor detected (See Figure 4.16). Because register name and use varies by sensor, including a full breakdown of the registers in this manual would be counterproductive. Please see the user manual for each sensor for a full list of registers.

</table>
• LOE Utility Menus

Network Settings

![Network Settings Table]

Figure 4.19

The Network Settings are provided for advanced users only and should not normally require changes. Each LOE ships with the DHCP enabled, which means it will automatically connect to the APG-provided remote website (usually [www.levelandflow.com](http://www.levelandflow.com)) and configure its own Network Settings when plugged into a port providing direct internet access.
Security Settings

The Security Settings allow users to set their own user name and password for logging into the embedded webpage.

Labels

The Labels menu allow users to create custom labels for the Main Menu, the LOE, and the sensors attached to the LOE.
When labels are created in the Labels menu, they will be reflected on the Main Menu page (See Figure 4.22).

RS-485 Network Settings

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Figure 4.23
The RS-485 (Modbus) Settings menu controls the settings for the Modbus sensors (up to 10) attached to the LOE.

**PARAMETER** | **RANGE**
--- | ---
**Baud Rate Checkbox** | 9600 Baud

*Baud Rate Checkbox* is used to select the baud rate of the sensors connected to the LOE. All APG Modbus sensors communicate at 9600 Baud.

**PARAMETER** | **RANGE**
--- | ---
**Numb of Sensors On Line** | 0 - 10

*Numb of Sensors On Line* sets the number of Modbus sensors connected to the LOE. This setting is not automatically populated or updated. The user must change the setting manually. *Numb of Sensors On Line* must always be equal or greater than the number of actual sensors attached to the LOE.

**NOTE:** For best results, set *Numb of Sensors On Line* to the highest number of number of sensor TO BE connected. No further adjustments will be needed as those sensors are connected to the LOE.

**PARAMETER** | **RANGE**
--- | ---
**Sensor Number to View** | 1 - 10

*Sensor Number to View* selects number of the sensor for the LOE to poll for populating the Main Menu and for editing parameters in the Modbus Holding Register menus.

**PARAMETER** | **RANGE**
--- | ---
**New Sensor Number** | 0 = No Change
1 - 10

*New Sensor Number* changes the sensor number assigned to the sensor selected by *Sensor Number to View*.

**IMPORTANT:** When “Change” is pressed to assign a new sensor number, *Sensor Number to View* DOES NOT update.

**PARAMETER** | **RANGE**
--- | ---
**RS485 Sample Rate** | 1 - 20 Seconds

*RS485 Sample Rate* determines how often the LOE polls the selected Modbus sensor.
Chapter 5: Maintenance

• General Care

Your LOE series controller is very low maintenance and will need little care as long as it is installed correctly. However, in general, you should:

• Avoid applications for which the sensor was not designed, such as extreme temperatures, contact with incompatible corrosive chemicals and fumes, or other damaging environments.
• Inspect the threads whenever you remove the sensor from duty or change its location.

• Troubleshooting

Should you have problems with your LOE Ultrasonic Sensor, here are some troubleshooting steps.

• Check the received signal strength (See Figure 4.9). If the signal strength is low, alternately increase Pulses and Sensitivity (See Figure 4.4) until the signal strength improves.
• Ensure Temperature Compensation (See Figure 4.4) is On (set to 1).
• Set the Gain Control to AutoSense (See Figure 4.4).
• Ensure that Blanking (See Figure 4.4) is accurately set to account for any unwanted targets between the sensor and the closest acceptable target (See Figures 4.5 - 4.7).

Should you have problems with your LOE Modbus Network Controller, here are some troubleshooting steps.

• Check the Modbus Network connections at the LOE and at each of the attached sensors.
• Ensure that each attached sensor has been assigned a unique Sensor Number (Figure 4.23; Assigning Modbus Sensor Numbers, page 12).
• Check the Holding Register Settings for each attached sensor (Figures 4.17 and 4.18).
• **Calibration**

This procedure uses targets at known distances to calibrate the LOE sensor's accuracy. A wall or other large, flat object is recommended for the long range target.

• Point the sensor at a target at a known distance near the maximum range of the sensor (See Figure 5.1).
• Adjust the Multiplier value until the distance reading on the sensor matches the actual measured distance to the target (See Figure 4.4).
• Point the sensor at a target near the minimum measurement range, 1' plus any Blanking distance (See Figure 5.2).
• Adjust the Offset value until the distance reading on the sensor matches the actual measured distance to the target (See Figure 4.4).
• Repeat previous two steps until no further adjustment is required.

• **Repair and Returns**

Should your LOE require service, please contact the factory via phone, email, or online chat. We will issue you a Return Material Authorization (RMA) number with instructions.

• Phone: 888-525-7300
• Email: sales@apgsensors.com
• Online chat at www.apgsensors.com

Please have your LOE's part number and serial number available. See Warranty and Warranty Restrictions for more information.
