Modbus Network Display
Series: MND

The MND Modbus Network Display provides a local display that can be wired to a local Modbus network or sensor, displaying readings from any of the sensors in the network (up to 10). It is easy to use and very flexible. The MND can operate in either master or sniffer mode. An output relay can be configured to provide power to a slave sensor, allowing for precise sensor power control. With the ability to listen in on master-sensor communication or poll sensors for current readings, the MND provides a valuable display option for your network.
