Thank You

Thanks for purchasing an RPM resistive continuous float level transmitter from us! We appreciate your business and your trust. Please take a moment to familiarize yourself with the product and this manual before installation. If you have any questions, at any time, don’t hesitate to call us at 888-525-7300.

1. Description

The RPM utilizes reed switches in the instrument’s stem and a permanent magnet in the float. As the float rises or falls with the level of the liquid, the magnet inside the float acts on the reed switches inside the stem and provides a resistive-chain output. The RPM is also available with optional electronics that convert the resistance output into a 4-20mA signal.

2. How To Read Your Label

Each label comes with a full model number, a part number, and a serial number. The model number correlates with all the configurable options and tells you exactly what you have. Compare the model number to the options on the datasheet to identify your exact configuration. You can also call us with the model, part, or the serial number, and we can help you.

You’ll also find all hazardous certification information on the label.

3. Warranty

This product is covered by APG’s warranty to be free from defects in material and workmanship under normal use and service of the product for 24 months. For a full explanation of our Warranty, please visit https://www.apgsensors.com/about-us/terms-conditions or contact Technical Support to receive a Return Material Authorization before shipping your product back.

Scan the QR code below to read the full explanation of our Warranty on your tablet or smartphone.

4. Dimensions

RPM Dimensions

5. Mounting and Installation Instructions

The RPM should be installed in an area—indoors or outdoors—which meets the following conditions:

- Ambient temperature between -40°F and 185°F (-40°C to 85°C)
- Relative humidity up to 100%
- Altitude up to 2000 meters (6560 feet)
- Altitude up to 2000 meters (6560 feet)
- Altitude up to 2000 meters (6560 feet)
- Relative humidity up to 100%
- Altitude up to 2000 meters (6560 feet)
- Ambient temperature between -40°F and 185°F (-40°C to 85°C)

Installation Notes:

- The sensor is located away from strong magnetic fields, such as those produced by motors, transformers, solenoid valves, etc.
- The medium is free from metallic substances and other foreign matter.
- The sensor is not exposed to excessive vibration.
- Do not locate your RPM sensor near inlets/outlets.

Mounting Instructions:

- Plug Mounting: Provide the compatible female boss on the tank and install the probe with suitable gasket.
- Flange Mounting: Provide the compatible mating flange on the tank and install using a suitable gasket.
- Clamp Mounting: Tighten a U-bolt stainless steel mounting bracket around the RPM’s stem, just below the union.
- Flange Mounting: Provide the compatible mating flange on the tank and install using a suitable gasket.
- Plug Mounting: Provide the compatible female boss on the tank and install the probe with thread tape.

6. Wiring Terminals for Voltage Operation

The wiring of your RPM is as follows:

- White Wire: Voltage Out
- Black Wire: Ground
- Red Wire: +24 VDC
- Red Wire: 5V to +24 VDC
- Black Wire: Ground
- White Wire: Voltage Out

**DANGER:** Do not remove the housing cover until the atmosphere is determined safe, and the power supply is turned off.

**IMPORTANT:** Your RPM MUST be installed according to drawing 9001415 (Explosion Proof Wiring Drawing) or 9001414 (Intrinsically Safe Wiring Drawing) to meet listed approvals. Faulty installation will invalidate all safety approvals and ratings.
**Removal Instructions**

Removing your RPM from service must be done with care. It’s easy to create an unsafe situation, or damage your sensor, if you are not careful to follow these guidelines:

• Ensure all circuits are de-energized, and any hazardous atmosphere has dispersed.
• Disconnect wires, either at terminals in the RPM head or at your system.
• Remove the RPM with an appropriately sized wrench (per your mounting type).
• Clean the RPM's stem and float of any debris (see General Care) and inspect for damage.
• Store your RPM in a dry place, at a temperature between -40° and 85°C (-40° and 185°F).

**Offset and Span Calibration (4-20 mA output probes only)**

This procedure can be performed in a non-hazardous area, either prior to installation, or by temporarily uninstalling your 4-20 mA RPM probe:

• Set DC power supply to 24 VDC, and connect to the RPM probe, with ammeter in loop.
• Move float to the desired position for 4 mA output.
• Using a jeweler's screwdriver or a suitable instrument, adjust the "Offset" potentiometer until you have a 4 mA output.
• Move float to the desired position for 20 mA output.
• Using a jeweler's screwdriver or a suitable instrument, adjust the "Span" potentiometer until you have a 20 mA output.
• Repeat as necessary to fine tune calibration. (See Figure 8.1)
• Replace the housing cover when finished.

**General Care**

Your RPM resistive continuous float level transmitter is very low maintenance and will need little care as long as it is installed correctly. However, in general, you should:

• Periodically inspect the stem and floats for any trapped debris, sediment, or other foreign material.
• Avoid applications for which the RPM was not designed, such as extreme temperatures, contact with incompatible corrosive chemicals, or other damaging environments.
• If your RPM has an NPT mount, inspect the threads whenever you remove it from duty or change its location.
• Never leave the housing cover off. If the cover is damaged or lost, order a replacement immediately.

**Offset and Span Calibration (4-20 mA output probes only)**

This procedure can be performed in a non-hazardous area, either prior to installation, or by temporarily uninstalling your 4-20 mA RPM probe:

• Set DC power supply to 24 VDC, and connect to the RPM probe, with ammeter in loop.
• Move float to the desired position for 4 mA output.
• Using a jeweler's screwdriver or a suitable instrument, adjust the "Offset" potentiometer until you have a 4 mA output.
• Move float to the desired position for 20 mA output.
• Using a jeweler's screwdriver or a suitable instrument, adjust the "Span" potentiometer until you have a 20 mA output.
• Repeat as necessary to fine tune calibration. (See Figure 8.1)
• Replace the housing cover when finished.

**WARNING:** SUBSTITUTION OF COMPONENTS MAY IMPAIR INTRINSIC SAFETY; AVERTISSEMENT -- LA SUBSTITUTION DE COMPOSANTS PEUT COMPROMETTRE LA SECURITE INTRINSEQUE.

**DANGER:** OPEN CIRCUIT BEFORE REMOVING COVER or KEEP COVER TIGHT WHILE CIRCUITS ARE ALIVE; AVERTISSEMENT -- COUPER LE COURANT AVANT D'ENLEVER LE COUVERCLE, ou GARDER LE COUVERCLE FERME TANT QUE LES CIRCUITS SONT SOUS TENSION.

**DANGER:** EXPLOSION HAZARD-DO NOT DISCONNECT WHILE CIRCUIT IS LIVE UNLESS AREA IS KNOWN TO BE NON-HAZARDOUS; AVERTISSEMENT -- RISQUE D'EXPLOSION. NE PAS DEBRANCHER TANT QUE LE CIRCUIT EST SOUS TENSION, A MOINS QU'IL NE S'AGISSE D'UN EMPLACEMENT NON DANGEREUX.

**IMPORTANT:** SEAL SHALL BE INSTALLED WITHIN 50 mm OF THE ENCLOSURE; IMPORTANT -- UNSCELLEMENT DOIT ETRE INSTALLE A MOINS DE 50 mm DU BOITIER.

**NOTE:** This procedure can be performed in a non-hazardous area, either prior to installation, or by temporarily uninstalling your 4-20 mA RPM probe.

**NOTE:** You may also return the RPM probe to the factory for repair and/or adjustment.

**Repair Information**

Should your RPM require service, please contact us via email, phone, or online chat on our website. We will issue you an RMA number with instructions.
